EDUCATION

California State University, Long Beach | Long Beach, CA

B.S. in Computer Science | GPA: 3.5

May 2026

Relevant Courses: Data Structures, Algorithms, Discrete Structures, Object Oriented Development, Computer Architecture, System Programming, Operating Systems, Database Fundamentals, Intro to Networks and Distributed Computing, Intro to Computer Security, Software Project Management and Testing

TECHNICAL SKILLS

Programming: C++, Python (Flask), Java, JavaScript (Node.js, React.js), SQL, HTML, CSS

Technical Tools: Git, GitHub, Visual Studio Code, IntelliJ IDEA, VIM

Operating Systems: Windows 10/11, Linux

PROJECTS

ClickUp Task Manager

- Built a Flask app for a post-production company to organize tasks across shows and scenes in ClickUp. Users can auto-create tasks from CSV files with details such as timecode, task name, and due date.
- Implemented a cloning feature to duplicate tasks across multiple dates with automatic start/due date adjustments.
- Used Node.js with Express.js for the backend, Axios for API calls, Bootstrap 5 for the UI, and the ClickUp API for task creation and updates.

Internships Filter

- Developed a Flask app to fetch and display internship listings from popular GitHub Internship README repositories. Users can filter listings by company, role, and location, including exclusion filters (e.g., -remote).
- Tracks application status and displays results in an interactive table.
- Used Flask for the web framework and requests for data fetching.

Steam Game Viewer

- Created a Flask web app to display a user's Steam game library using the Steam Web API.
- Fetched owned games, playtime data, and last played timestamps, with automatic cover image downloads and caching.
- Enabled launching Steam games directly from the web application.
- Used Flask for routing, requests for API calls, JSON for data handling, and session-based credential storage.

Online Snakes and Ladders Game

- Built an online multiplayer Snakes and Ladders game using Flask with browser-based matchmaking via a shared link.
- Exposed the local server publicly using ngrok, enabling real-time multiplayer access without cloud hosting.
- Implemented real-time game state syncing and in-game/global chat using server-managed sessions.
- Used HTML, CSS, and JavaScript for the frontend and Python/Flask for backend game logic and player coordination.

EXTRACURRICULAR EXPERIENCE

Robotics Team 7042 | Team Captain

August 2022 - June 2023

- Led the team to the FIRST Robotics World Championship in 2023.
- Assisted in programming using Java and the WPILib framework to control key robot functions.
- Demonstrated leadership, teamwork, and problem-solving skills in a highly competitive, fast-paced environment.
- Coordinated team efforts in robot design, strategy development, and competition preparation.
